One unique feature of our program is the Surveying Studio Course in which students are assigned to open-ended problems simulating real life situations.

Cases with different themes are selected and developed for each year of study. For example, students may be asked to:

- Identify and tackle problems in a real estate development project from a developer's prospective;
- Advise clients on the feasibility of a construction project or real estate investment opportunity and recommend solutions;
- Explore current and future issues in the real estate development industry from a regional or political perspective.

The Surveying Studio course takes a student-centered and problem-based approach to learning.

Students work in small groups, with the guidance from department staffs, to solve various cases. It aims at integrating theoretical knowledge onto real life scenarios in an innovative manner. In addition, the course also serves to enhance students' presentation, cooperation and leadership skills.
Final Year Surveying Studio Exhibition

2012 - 2013 - Urbanisation and Ageing Population

2013 - 2014 - Green Building

2014 - 2015 - Smart City

2015 - 2016 - The People Make the Place

2016 - 2017 - Sustainable Hong Kong

2017 - 2018 - Smart City
